

POWER BI – HR Analysis Dashboard

I recently completed a comprehensive HR Analysis Dashboard using Power BI, aiming to help companies gain valuable insights into their employee data and make informed decisions. Here's a glimpse into what I developed:

Summary Page:

A snapshot of key HR metrics.

Year-on-Year trends in Headcount and Attrition.

Headcount Analysis:

Headcount breakdown by Business Unit.

Headcount distribution across various age groups.

Gender-based Headcount analysis.

Breakdown of Headcount by Job Title.

Department-wise Headcount distribution.

Enhanced Analysis with Slicers:

Dynamic filtering options by department, country, and employee full name.

Data Refresh Information:

A visual element indicating the date and time of the last data refresh.

This dashboard transforms HR data into actionable insights, giving the company a clearer understanding of their workforce dynamics.

POWER BI – HR Analysis Dashboard
